MY IDEA "ONLINE VOTING SYSTEM"
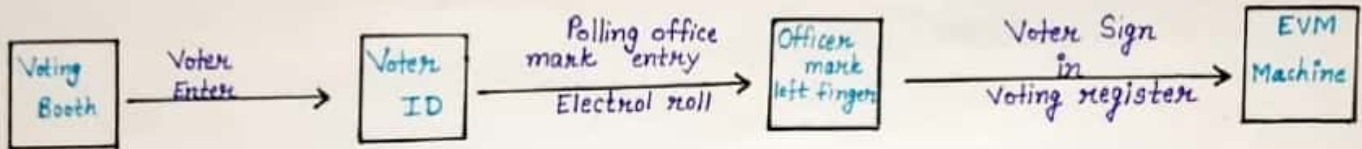

Good Morning to all of you myself Sagar B-Tch II yr (CSE).

I am proposing "online Voting System" to solve voting problem in this Era of COVID-19. As present voting system need pressing the button for vote which can be vital source for spreading corona virus. Second problem of present voting system is %. age of voters is very less because all voters may not be present near to their society and near to their Voting Booth- so online voting can solve this problem. we can use in voting system "Eign Eace Algorithm".

The main concept of Eign face algorithm is to follow the appreance-based approach.

ONLINE VOTING SYSTEM
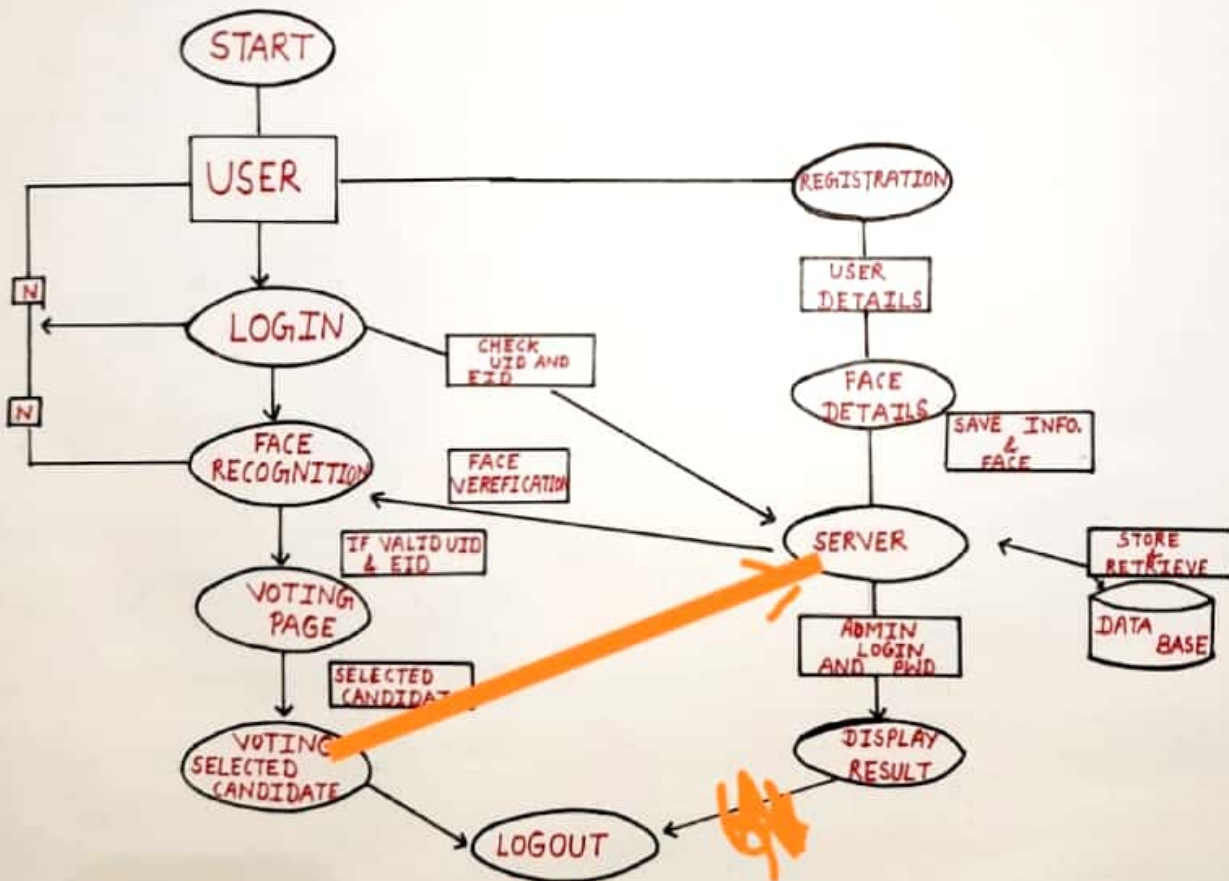

PRIOR ART

```
┌─────────┐          ┌────────┐   Polling office   ┌──────────┐            Voter Sign      ┌──────────┐
│ Voting  │  Voter   │ Voter  │   mark  entry      │ Officer  │                in          │   EVM    │
│ Booth   │──Enter──▶│  ID    │──────────────────▶ │  mark    │──────────────────────────▶ │ Machine  │
└─────────┘          └────────┘   Electrol roll    │left finger│       voting register     └──────────┘
                                                    └──────────┘
```

PROBLEM

- The voting person may use fake voting card and cast his vote.
- The person has two travel long place to his constituency to cast his vote.

PROPOSED SOLUTION

ADVANTAGE :-

- Reduce cost through simple and efficient election management.
- Receive legally valid result and conduct online election to democratic principle.
- Increase voters turn out with easy vote submission and digital voter communication.
